

## Waste Management and Environmental Protection / Northern Region, Morocco

### Project Description

In January 2007 the Consortium IU-IGIP-SEGU with INFRASTRUKTUR & UMWELT as the lead consultant was commissioned with implementing the project "Improvement of Municipal Solid Waste Management, Tangier / Northern Region". The project is financed by GTZ and the project partner is Tangier Municipality. The Project is one of four components of the Environmental Programme Morocco, which is supported by the German development cooperation.

Main focus of the project is the improvement of the waste disposal situation, increased material and energy recovery from waste and reduced CO<sub>2</sub> emissions. Other aspects include the monitoring of the private sector performance, training and capacity building.

### Results

- Improved landfill operation and considerably reduced landfill emissions
- Inter-municipal cooperation for waste disposal in the region
- Increased material and energy recovery from waste
- Identified potentials to reduce CO<sub>2</sub>-emission
- Establishment of environmental training and information centers

### Our Services

- Preparation of waste management plans
- Assessment of material and energy recovery options
- Development of tools and procedures for performance monitoring
- Identification and development of measures for CO<sub>2</sub>-reduction measures and climate protection
- Training and capacity building.
