

Feasibility Study for Integrated Waste Management in the Vlora Region, Albania

Project Description

Within the Western Balkans Investment Framework (WBIF) the European Bank for Reconstruction and Development (EBRD) in cooperation with KfW Development Bank supports the Government of Albania in its effort to develop an integrated solid waste management system and to execute the planning and construction of a new regional sanitary landfill in the Vlora region.

INFRASTRUKTUR & UMWELT (IU) in cooperation with ERM GmbH and the Albanian consulting companies FLAG and Plan-Consult have been assigned with the consultancy services for the elaboration of a feasibility study for this project.

Besides the realization of a new sanitary landfill the project focus is on implementation of Albanian targets for recycling and waste valorisation

Results

- Development of integrated solid waste management concept
- Assessment and design of measures for waste treatment and recycling
- Site selection for a new regional sanitary landfill and landfill design
- Recommendations for closure of existing municipal dumpsite
- Assessment of potential greenhouse gas mitigation measures
- Feasibility assessment for all proposed components of the integrated solid waste management concept
- Environmental and Social Impact Assessment
- Elaboration of implementation and operation concept, incl. definition of necessary supportive measures
