

## Supporting the Development of UNRWA's Solid Waste Management Strategy

### Project Description

Facing growing constraints and decreasing funds, UNRWA approached GIZ and requested support towards the development of an agency-wide Solid Waste Management (SWM) Strategy.

INFRASTRUKTUR & UMWELT has been assigned by GIZ to support the development of UNRWA's SWM Strategy and to develop tools to apply this strategy to the UNRWA Fields and Camps.

Aim of the project is to structure the SWM approach of the entire Agency, to increase effectiveness and efficiency of SWM services in the Fields and to introduce environmental friendly and cost efficient SWM technologies.

### Results

- UNRWA's SWM policy and strategy is available for improvement of SWM services
- Tools to improve SWM services are developed and applied
- Improvement measures are agreed upon in a participatory approach and implemented in pilot camps

### Our Services

- Conduction of an in-depth assessment in the area of SWM
- Elaboration of an agency wide SWM policy, SWM Operational Strategy for Jordan Field, and SWM Masterplans for selected camps
- Training of UNRWA staff in general in SWM and in application of strategic tools
- Support the cooperation of UNRWA and host municipalities with regard to SWM (e.g. waste transfer and disposal)
- Identify possible cooperation partners for UNRWA and facilitate a dialogue about possible synergies
- Support UNRWA Jordan Field in selecting a pilot camp and implement at least one "quick win" project
